

Remote Commentary Solution

The Quicklink Remote Commentary Solution allows production teams to add real-time commentary from any location with an internet connection. The remote commentator/caster views the live event in a webpage and their commentary is added into the live program

Highlights

- ▶ Remotely commentate on a live event from any location in the world with an internet connection.
- ▶ Scale the system from commentating on one event in one additional language to multiple simultaneous commentaries in different languages on multiple events.
- ▶ Add value to your broadcast through content localisation.
- ▶ Use on premise dedicated hardware or use SaaS model. SaaS allows multiple commentary channels to be started, scaling the system quickly without the requirement to deploy additional on-premise hardware.

Remote commentary over the public internet from any location

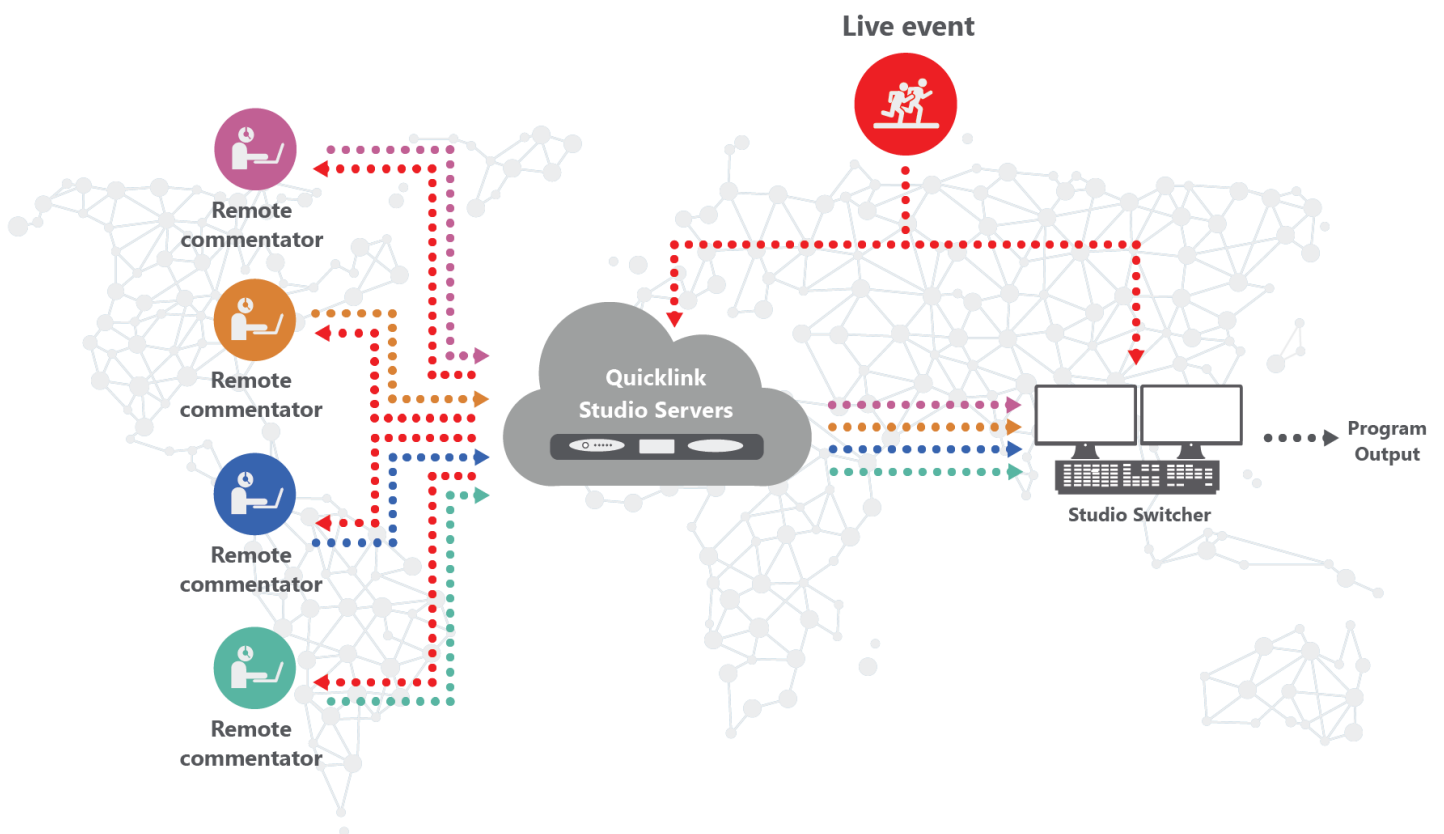

**No on-site
caster required**

**Produce more,
reach more**

**Synchronise
multiple locations**
